WORK EXPERIENCE

Software Engineer | Full-time

Jun 2023 - Present

R Systems

Remote • Pune

Measurabl | Connect Real Estate

- Built and enhanced features across the utility-sync surface area, including utility account APIs, meter-reading inspections, admin workflows, and the Convert to Original Bill Units feature with async processing, audit visibility, and dual-unit handling — supporting **280K+ buildings** and **125K+ utility accounts** on the platform.
- Migrated building and account sync flows to UUID-based v2 APIs, eliminating runtime reliance on legacy mapping tables that collectively held **225K+ records**, improving service boundaries and contributing to Kafka-driven ingestion pipelines with schema validation, dead-letter handling, and DynamoDB-backed ID mappings.
- Resolved production issues across provider credential and utility-sync flows, reduced SonarQube-flagged frontend complexity and code smells by **~30%**, and lifted unit-test coverage on the Java services from **~65% to ~80%** and on the Angular modules from **~55% to ~75%**.

Measurabl | BillAI

- Built and scaled a GenAI-powered utility-bill extraction platform using NestJS, Next.js, Prisma, PostgreSQL, Kafka, and AWS, integrating an internal LLM/RAG service with S3-based ingestion, async webhooks, and Kafka-driven processing pipelines — processing **5,000+ bills/month** across **~11,000 client utility accounts** (replacing a third-party vendor and unlocking **\$250K+ in annualized savings**).
- Designed and delivered end-to-end ingestion and review workflows, including bulk uploads, validation, failed-upload handling, image/PDF support, file-size enforcement, and reviewer dashboards with audit states, re-extraction flows, and editable metadata — reducing manual review time by **~50%**.
- Enhanced reliability, security, and observability through audit logging, API key revocation, NextAuth v5 migration, Redis caching, and Datadog monitoring, along with production vulnerability fixes — improving extraction accuracy to **~92%** field-level parsing.

Comcate

- Developed REST APIs, microservices, and full-stack workflows using NestJS, Remix, and Spring Boot with PostgreSQL, DocumentDB and Redis, integrating services like Okta, Mailgun, SQS, and Terraform to build scalable and secure backend systems.
- Designed recursive category-based custom fields in DocumentDB for complex nested violation configurations, and improved reporting performance using MongoDB aggregation pipelines, reducing query latency by **~25%**.
- Optimized 5+ legacy APIs and cron jobs (notifications, late fees, SLA tracking), achieving up to **3× latency improvement** and **50% runtime reduction**, while integrating Constant Contact and enhancing geospatial query and map-rendering workflows for location-based violation management.

Tech Stack : Spring Boot, Hibernate, NestJS, Next.js, Angular, PostgreSQL, MongoDB, Redis, Kafka, AWS, Terraform, OAuth2/JWT

Salesforce Developer | Internship

Feb 2023 - May 2023

Tata Consultancy Services

Remote

- Developed a scalable hospital management portal using Salesforce Lightning Web Components (LWC) and Apex, processing **1,000+ patient records weekly** and integrating Salesforce Health Cloud with hospital systems for real-time patient data access.

Software Developer | Internship

Nov 2021 - Apr 2022

Ace Tech Ventures

Remote

- Developed a POC for an intelligent traffic surveillance system, implementing ML modules for speed detection, license plate recognition, and vehicle classification using Python, OpenCV, and TensorFlow, alongside a React dashboard for real-time monitoring and violation flagging.

EDUCATION

J D College of Engineering and Management | Nagpur

Jun 2019 - May 2023

B.Tech | Computer Science

CGPA : 9.09

PROJECTS

Home Energy Tracker

- Developed a scalable microservices-based Home Energy Tracker using Spring Boot, Spring Cloud, implementing API Gateway, service discovery, OAuth2/JWT (Keycloak), and resilience patterns (Circuit Breaker) to enable secure, fault-tolerant real-time energy monitoring.

Coder's Collab

- Built a real-time audio collaboration platform using React, Node.js, WebSockets, and MongoDB, enabling users to join rooms with speaker/listener roles, deployed via Docker and Nginx with SSL.

SKILLS

Programming Languages :

Java, TypeScript, JavaScript, Python, SQL

Frameworks & Libraries :

Spring Boot, Spring Security, Hibernate, NestJS, React, Next.js, Angular

Databases :

PostgreSQL, MySQL, DocumentDB, Redis, Elasticsearch

Cloud & Devops :

AWS, Kafka, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions

Soft Skills :

Problem Solving, Critical Thinking, Decision Making, Communication, Collaboration

ACHIEVEMENTS

- Secured **2nd place globally** in R Systems Coding Carnival.
- Ranked **2nd** in Code Heist Social Hackathon 2021.
- Achieved top **0.1% ranks** in CodeChef contests (Global Rank **15/26K+** and **123/12K+** participants).
